Graphic Designer
I produced visual, print, and digital assets for Brisbane's first boutique office leasing agency. I also led photography and videography for listings and team content, maintaining a cohesive visual identity across all media. Collaborating closely with directors and leasing agents, I helped refine and strengthen Caden's overall creative and brand performance.

Founder/Designer
I designed and developed a suite of custom WordPress websites for Rise SEO, blending creative design with technical precision. I crafted responsive, high-performance layouts that aligned with brand objectives and marketing strategy, ensuring visual consistency and user-focused functionality.

Web Designer
I designed and developed custom WordPress websites for multiple clients, ensuring each site was visually refined, responsive, and aligned with business objectives. My work combined strong visual design with technical execution, delivering websites that were both aesthetically engaging and strategically effective.

Founder/Designer
I worked closely with a client, Giuliano Giaccaglia, to design a video-sharing interface similar to YouTube in the web3 space called Netbox. I conducted A/B tests to improve the user experience and align with business goals. I also created a consistent brand identity, landing pages, and impactful feature pages. My focus was on creating intuitive screens that enhance the overall user experience.

Graphic Designer
As Graphic Designer, I created digital and print marketing materials, refreshed internal and corporate design systems, and produced HTML5, social media, and ad campaign assets with agency partners. I led the healthCar sub-brand design with Provident Insurance, delivering signage and collateral for over 100 locations, and developed 3D visuals for the first new VTNZ branch in ten years.

Graphic Designer
I collaborated with the CEO to redesign Eight360's brand identity and website using Elementor, creating merchandise, collateral, and stakeholder materials. I also worked with the Software Developer to produce technical visuals that supported product launches and investor presentations.
